# WEATHER

## WEATHER SYNOPSIS BY REGION:

### **NORTHERN CALIFORNIA**

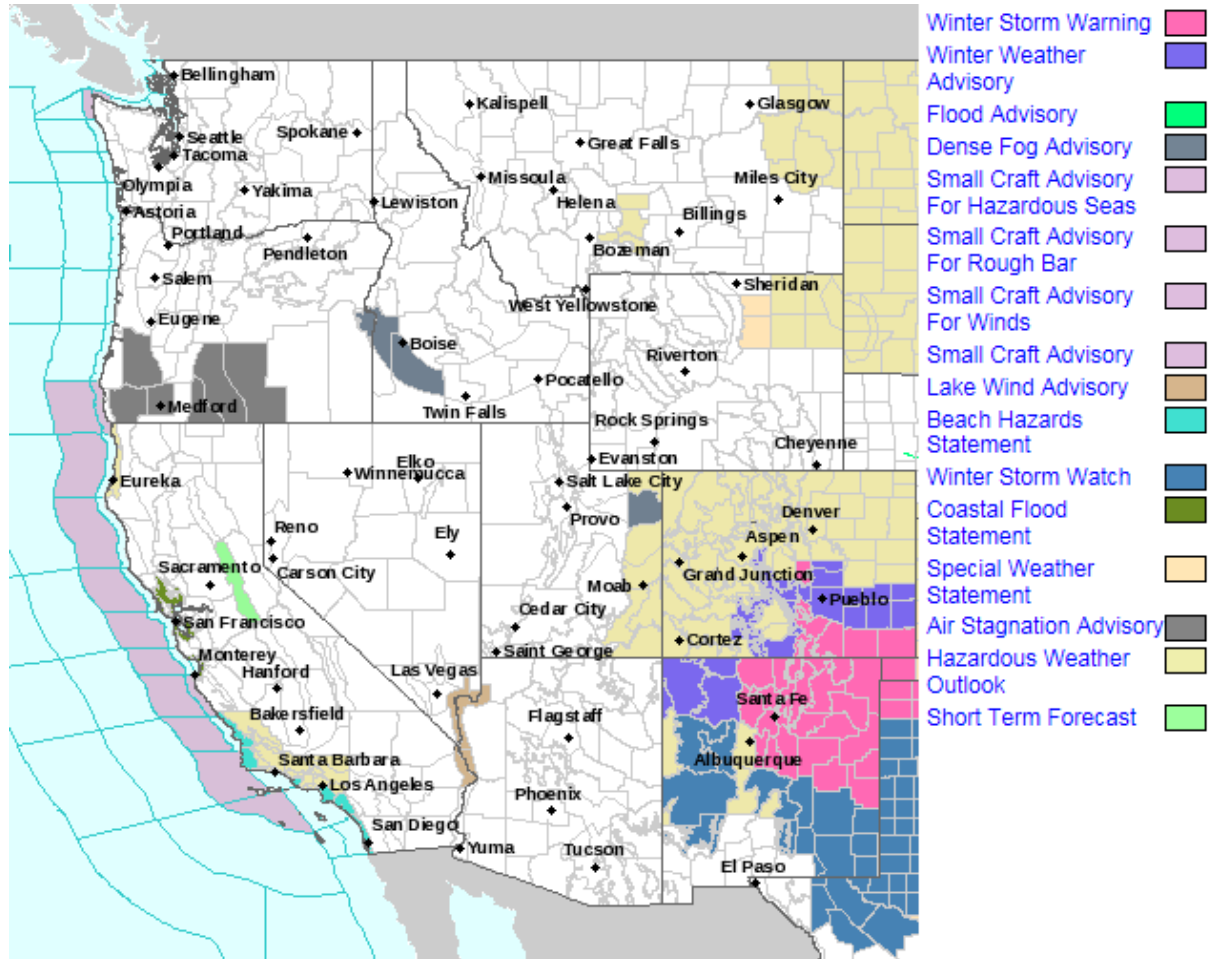

A weak low pressure trough will be moving through the state today with some high cloudiness for Northern California. A high pressure ridge centered off shore will be moving over Northern California during the next few days for mostly clear skies, although some thin high cloudiness is possible at times. The ridge may weaken some on Thursday as a weather system passes by to the north, but it will quickly rebound and strengthen somewhat for the weekend. Temperatures will generally be 5-10 degrees above normal through Thursday, then warm to as much as 15-20 degrees above normal for a day or two over the weekend. Some relatively light N to NE winds will be in place today, then become more NE to E and a bit stronger overnight before decreasing some for the day Wednesday. After a couple days of relatively light winds or more variable directions, stronger NE to E winds will return for the weekend.

### **SOUTHERN CALIFORNIA**

A weak trough will cool temperatures to around 5 degrees above normal today, with 50s in the mountains and mid 60s to mid 70s in the valleys today. Minimum humidity will be mainly between 15% and 30% away from the San Joaquin Valley and coastal areas. Winds will be light today. A ridge of high pressure will build into California from the Pacific Ocean bringing a slow warming trend and low humidity to most of the region Wednesday through this weekend. Temperatures will be 10 to 15 degrees above normal by this weekend. There will be north to east winds of 15 to 25 mph with gusts to 40 mph across the mountains and below the canyons and passes of Southern California Wednesday morning through early Thursday afternoon. Very strong offshore winds of 20 to 40 mph with gusts to 60 mph will surface across much of Southern California this weekend. In the Central Valley, temperatures will be cool along with high humidity through this weekend due to widespread low clouds and fog.
